

## The Origin of Arcs (Developments in Geotectonics)

This volume contains a collection of papers presented as distinguished guest lectures at the International Conference on "The Origin of Arcs" held at the University of Urbino in September 1986, under the joint sponsorship of the European Union of Geosciences and the Italian Geological Society. The workshop on island and mountain arcs has been organized with the aim of increasing our understanding of the intrinsic nature of orogenic and post-orogenic processes, on the basis of empirical factual data, rather than particular theoretic models. Quite often a trivial piece of field data appears to bear much more weight than many fascinating hypotheses put forward by the human mind. This seems to be much more valid in geology, where a special method is necessitated by the particular nature of the geological phenomena and the time concept. Every general law deduced should be rooted in the study of the earth's development in geological time. It is the editors' opinion that there must first be an inductive picture by means of geological methods and then it must be interpreted by geophysicists in the light of physical laws.

elementov kulturne dediščine je potrebno za oblikovanje in trenje turisticne ponudbe. Projekt SEMENJ.SI spodbuja kulturni turizem in se ukvarja s prepoznavanjem in identifikacijo kulturne dediščine in njenih nosilcev in jih usposablja za predstavitev le te obiskovalcem. Na drugi strani se povezuje s turistinim gospodarstvom in vzpostavlja register ponudnikov dediščine za nadgradnjo turisticne ponudbe. [Picture Picture Create a free web site with Weebly](#)
