

The Observers Year: 366 Nights in the Universe (Patrick Moores Practical Astronomy Series)

The Observers Year is likely to become a classic for years to come. It will not date and will appeal to amateur astronomers almost regardless of their experience. There are 365 nights in every year (366 in a leap year!) and from the amateur astronomers point of view, no two are alike. That is why Patrick Moore has written this unique book to highlight special objects of interest on every night of the year. He talks about the history of the constellations, double stars, nebulae, the moon, planets, even the asteroids. Beginning January 1st, he works through the year night by night.....
